

What's in Your Software?

Automate software supply chain risk management from an unlimited number of suppliers, in a seamless, simple, and safe way – helping you stay in compliance with regulations related to data and customers safety.

- ✓ **Get Efficient:** Centralized management for artifacts, including NDAs, SBOMs & SLAs
- ✓ **Hold Others Accountable:** Complete the puzzle of missing OSS components for existing SBOMs
- ✓ **Demand Reliable Data:** Get complete OSS component details
- ✓ **Leverage Your Data:** Monitor and rank your new view of software vulnerabilities
- ✓ **Take Action:** Identify and fix hidden issues

IR Audit Features

- ✓ Identifies all components within software
- ✓ Supports integration with 3rd party scanners code evaluation platforms
- ✓ Evaluates licensing versus policy
- ✓ Generates comprehensive risk score
- ✓ Identifies deficiencies in vendor supplied SBOM's
- ✓ Flags affected software when new vulnerabilities are identified
- ✓ Identifies known vulnerabilities
- ✓ Allows for continual update of vendor SBOM's with risk monitoring
